Radiesse

Healthy young skin contains collagen that gives it volume, flexibility and strength. As part of the aging process, your own natural collagen breaks down, diminishing facial volume. This loss of elasticity and volume results in the wrinkles, facial lines and skin laxity that rob your skin of its youthful appearance.

Welcome Back Your Own Natural Collagen

The ideal way to achieve wrinkle reduction is by replenishing lost volume. With RADIESSE® wrinkle filler, you welcome back your own natural collagen to smooth out the signs of aging. That's because RADIESSE wrinkle filler's unique formulation stimulates collagenesis – the production of new collagen – which results in increased volume for natural looking wrinkle correction that may last a year or more in many patients. It's also why more and more cosmetic surgeons, estheticians, and other medical professionals are choosing RADIESSE wrinkle filler for long-lasting facial rejuvenation.

The RADIESSE wrinkle filler difference:

- Stimulates the body's own natural collagen production
- Instantly corrects wrinkles
- Results that may last a year or more in many patients
- Now FDA approved to enhance patient comfort with lidocaine mixing

Treatment with RADIESSE wrinkle filler takes only a few minutes, so adding back the volume that you've lost can be done during your lunch hour. In just one syringe, many patients can achieve long-lasting youthful results. And now you can ask your doctor about the RADIESSE treatment option that significantly improves comfort. Because treatment with RADIESSE wrinkle filler is simple, quick, comfortable and convenient, with immediately visible results that last, more and more people are discovering that it is the natural choice for maintaining a more youthful appearance.

Treatments

In this day and age, most of us are familiar with the importance of collagen. It's what gives your young skin its full, supple appearance. And when it breaks down, you may begin to see skin laxity and facial wrinkles. When the collagen goes away, it takes facial volume and elasticity with it, leaving you with a face that may look older than how you feel inside.

If you aren't ready to grow old gracefully, treatment with RADIESSE® wrinkle filler can bring back your own natural collagen and restore facial volume, with results that may last a year or more in many patients.

Smile Lines

For most of us, smile lines – also known as nasolabial folds – are nothing to smile about. These lines and creases run from the side of the nose to the corner of the mouth, and get deeper as we age and lose facial volume. They can make you look older, tired, or unhappy – even though you feel young and vibrant.

Fortunately for the young at heart, treatment with RADIESSE® wrinkle filler can bring back youthful volume and stimulate collagen production in this area, with results that may last a year or more in many patients.

Radiesse

Marionette Lines

Even if you have never heard of "marionette lines," you probably know what they are. These lines that run downward from the corners of the mouth can make you look like you're frowning, even when you're not.

They start out as fine lines, but can turn into deeper creases as we get older and lose facial volume.

RADIESSE wrinkle filler does more than just fill these troublesome wrinkles; it stimulates production of your own natural collagen for results that may last a year or more in many patients.

Oral Commissure

The corners of your mouth are known as the oral commissure. And as you age, you can lose volume in this area. The downturned appearance of the mouth can make you look like you are frowning or sad. Volume loss in this area often leads to the formation or the deepening of already-formed marionette lines as well.

Because RADIESSE® wrinkle filler replenishes lost volume by stimulating the body to produce its own natural collagen, it can provide volume back into this area, giving you a refreshed and youthful look.

Pre-Jowl

A little known area of the face that can make a big impact on the way we look is the pre-jowl sulcus. It's the area on either side of our chin. Volume loss in the skin associated with the aging process results in a hollowing of this area. As a result, jowls form as our facial features begin to sag.

Patient Comfort

You no longer have to dread the pain of injection with RADIESSE® wrinkle filler. In a recent clinical study, RADIESSE wrinkle filler has been proven to significantly reduce pain during treatment. That's because RADIESSE wrinkle filler can now be mixed with an anaesthetic called lidocaine prior to injection.

What that means for you is a safe, FDA-approved approach to significantly more comfortable treatment. In fact 90% of patients reported significant pain reduction when using RADIESSE wrinkle filler mixed with lidocaine.

Long-Lasting Youth

When you make the choice to restore facial volume and rejuvenate your appearance, choose beautiful and natural results that last. RADIESSE wrinkle filler delivers immediate, natural-looking volume and stimulates your body to produce new collagen for a youthful appearance that is long-lasting. In many patients, RADIESSE wrinkle filler benefits may last a year or more without costly and time consuming touch-ups.
